RESEARCH PROJECTS	Neural-enhanced Live Video Ingest at Scale • Designed an inference engine that delivers efficient and scalable live neural enhancement. • Implemented the end-to-end system on top of NVIDIA TensorRT, libvpx, and gRPC (~ 10.1K LoC). • Reduced computing cost by 3.0-22.3× and improved processing throughput by 2.5-10× .	AUG. 2020 – AUG. 2022
	Neural-enhanced Mobile Video Streaming • Designed an algorithm that accelerates neural enhancement using temporal redundancy across video frames. • Implemented the end-to-end system upon Exoplayer, libvpx, and Qualcomm SNPE (~ 9.4K LoC). • Improved processing throughput by 11.5× and reduced energy consumption by 88.6% .	NOV. 2018 – JUL. 2020
	Neural-enhanced Adaptive Video Streaming • Designed adaptive streaming that applies neural enhancement to video utilizing client computation. • Implemented the end-to-end system on top of MPEG DASH (dash.js) and TensorFlow (~ 13.6K LoC). • Improved user quality of experience by 43.08% or saved 17.13% of network bandwidth.	MAR. 2017 – OCT. 2018
